

Servers Contd

- Generally on Servers, we use Server Operating Systems such as
 - Linux
 - Unix
 - Windows Servers
 - Solaris
- Linux is most popular server operating system for running web based applications
- To communicate with kernel there are different shells [Refer Here](#)

- Linux Distributions [Refer Here](#)
- What is the purpose of ports ?
- How many ports exist on a system ?
- What are popular port numbers ?
- What are the applications that we can run on Linux Servers ?
 - Websites

WebServer

- This is a software which can run websites
- Webservers by default host websites which are developed in
 - html
 - css
 - javascript

- Examples:

- nginx
- apache
- iis

Application Server

- To have business logic implemented we need servers understanding high level languages such as
 - java (tomcat, glassfish)
 - .net (iis, kestrel)
 - php (nginx, apache)
 - python (wsgi, usgi, gunicorn)
 - nodejs (v8)

Databases

- To store the data generated by business logic we need database servers.
- Databases are of two types
 - SQL:
 - oracle
 - postgres
 - mysql
 - microsoft sql server
 - NoSQL
 - mongodb
 - cassandra
